Register

If the user clicks register the idea here is to simply reload the page with the login/Reguster Template instead of moving to a new webpage all together. Once login/Registation is completed, the end user will be auto-redirected to their account page.Login with Google will create a sudo account and have the user set a username Registering for the site through Either method Username Is Manditor and must be unique as of right now, display name will be optional and doesn't have to be uniquie.
